

Digital Literacy Project: Final Comprehensive Report

Course: Digital Literacy (CSE1021)

University: VIT Bhopal University

Student Name: Pranav Raghuvanshi

Reg No: 25BCY10108

Role: Student Digital Ambassador

Module 1: Digital Literacy Awareness Infographic (Canva)

1.1 Objective

The goal of Task 1 was to design a visual resource using Canva to define Digital Literacy and its essential components for the modern student.

1.2 Design Methodology

- **Template Selection:** Chose a professional infographic template to balance text and visuals.
- **Core Content:** Defined Digital Literacy, highlighted essential tools (GitHub, LinkedIn, Google Workspace), and outlined safe internet practices.
- **Branding:** Used a consistent color palette to maintain a professional "Digital Ambassador" aesthetic.

1.3 Reflection

"To complete the first module of this project, I utilized Canva to create a visual roadmap for engineering students at VIT Bhopal. My design defines digital literacy and provides a curated list of technical tools, specifically GitHub, LinkedIn, and Google Workspace. The final section emphasizes 'Digital Hygiene' to protect personal data. I found the challenge of distilling complex concepts into simple, actionable icons to be a rewarding exercise in visual communication".

Module 2: Building the Student Digital Portfolio

2.1 Platform Selection & Technical Utility

I optimized my presence across three industry-standard platforms to establish a multi-faceted professional identity:

- **LinkedIn (Professional Networking):** I utilized LinkedIn to build a "Digital Resume" to connect with industry leaders and VIT Bhopal alumni.
- **GitHub (Technical Laboratory):** My primary repository for hosting coding projects and practicing Git version control, which is a mandatory skill in modern software development.
- **Kaggle (Data Science):** I chose Kaggle to access global datasets and participate in community challenges that sharpen analytical thinking.

2.2 Reflection

"Each platform serves a distinct purpose in my development as a Computer Science professional. Over the next four years, I plan to use these as a dynamic record of my growth, moving from basic scripts on GitHub to complex full-stack applications, while sharing project milestones on LinkedIn to build a 'digital trail' for future recruiters".

Module 3: Technical Platforms & Collaboration

3.1 Part A: HackerRank (Problem Solving)

I successfully solved the 'Solve Me First' challenge to demonstrate fundamental programming logic and the ability to pass automated test cases.

3.2 Part B: Google Forms & Sheets (Collaboration)

I designed a Digital Literacy Awareness Quiz using Google Forms and integrated it with a Google Sheet to automate real-time data collection and response analysis.

3.3 Reflection

"HackerRank will serve as my training ground for technical interviews and competitive coding, while mastering Google Workspace ensures I can collaborate efficiently on group projects. This module has equipped me with the dual-competency required to excel in both individual coding and collaborative data management".

Module 4: Professional Communication & Etiquette

4.1 Task Overview

This module focused on the "Digital Handshake" by drafting two high-stakes emails: one for an academic extension for a UHV assignment and an internship inquiry to a Google Recruiter for the STEP program.

4.2 Reflection

"A significant problem arises in professional environments when information is communicated via informal channels with poor tone. By using proper 'Email Etiquette'—including a clear subject

line and structured body—I replace ambiguity with professionalism, ensuring messages are received as task-oriented requests rather than personal attacks".

Module 5: Cybercrime Awareness & Prevention

5.1 Case Study Analysis

The 'RTO E-Challan' scam is a sophisticated form of Smishing and Social Engineering. In the Gondia/Bhandara incident, a victim lost ₹5 lakh after clicking a 'spoofed' URL designed to mimic the official Government of India Parivahan portal.

5.2 Reflection

"What surprised me most was how cybercriminals successfully bypassed technical security not through 'hacking' code, but by exploiting a victim's instinctual fear of government authority. Moving forward, I will strictly follow a 'Manual Verification' protocol—always navigating directly to official .gov.in portals rather than interacting with any unsolicited message".

Final Project Conclusion and Learning Outcomes

The completion of these five modules marks a significant milestone in my journey as a First-Year Computer Science and Engineering student at VIT Bhopal. Through this project, I have achieved the following core competencies:

- **Technical Versatility:** Mastered foundational tools including GitHub and Kaggle.
- **Professional Communication:** Refined my ability to navigate high-stakes correspondence.
- **Collaborative Problem Solving:** Learned to manage data and projects in a cloud-based environment.
- **Cyber Resilience:** Equipped to identify phishing vectors and utilize national reporting channels like 1930.
